- $\text{Speed} = \text{Distance} / \text{Time}$

- **Display and Recording:** The calculated speed is displayed, and if it exceeds the speed limit, a violation record is generated.

Sensor Technologies Employed

Different sensor types can be used based on accuracy, cost, and installation considerations:

- **Doppler Radar:** Uses radio waves to detect speed; highly accurate and suitable for open highway environments.
- **Infrared Sensors:** Detects when an IR beam is interrupted by a vehicle; simple but less precise.
- **Inductive Loop Sensors:** Embedded in the road surface, detect changes in magnetic fields caused by vehicles; reliable for fixed installations.
- **Ultrasonic Sensors:** Detect objects through ultrasonic waves; mainly used for short-range detection.

Design and Implementation of the Speed Checker System

Step-by-Step Development Process

Developing a robust microcontroller-based speed checker involves several stages:

- **Requirement Analysis:** Define speed limits, detection range, and data management needs.
- **Component Selection:** Choose appropriate sensors, microcontroller, and communication modules.
