- Ensure that all necessary materials (sterile containers, labels, preservatives if needed) are available.

Collection Process

The actual collection process involves:

- The individual should wash their hands thoroughly.
- Use a sterile container provided by the collection facility.
- Collect the urine sample midstream to reduce contamination from skin or external surfaces.
- Fill the container to the required level, usually specified by the testing facility.
- Securely close the container to prevent leaks.

Labeling and Documentation

- Immediately label the sample with the individual's identification details, date, and time of collection.
- Complete any accompanying documentation forms accurately.
- Record any observations, such as the appearance of the urine or issues during collection.

Storage and Transportation

- Store the sample in a secure, temperature-controlled environment if transportation is delayed.
- Transport the sample promptly to the testing laboratory following chain-of-custody protocols.

Adherence to Chain of Custody Protocols

Maintaining an unbroken chain of custody is vital under URC 522. This involves:

- Documenting every individual who handles the sample.
- Using tamper-evident containers and seals.
